URINARY CHECK-UP PET TEST

Pet urinary screening test

ANIMAL HEALTH

Urinalysis is an important tool in pet disease detection, as well as monitoring and screening animal health. Abnormalities can be indicative of diseases of the urinary system as well as other organ systems, including liver function, acid-base status, and carbohydrate metabolism.

WHY - BENEFITS

Urine analysis is useful to detect kidney disease and monitor animal health. Some abnormalities may be indicative of other organic systems diseases including kidney function, acid-base balance and carbohydrate metabolism.

WHO ARE THE INTENDED USERS

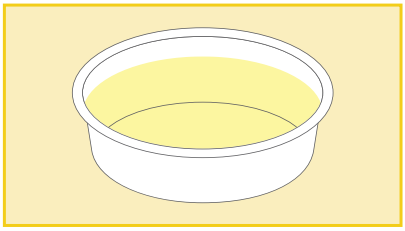
URINARY CHECK-UP PET TEST is recommended to everyone who wants to check their pet's health status.

TEST PRINCIPLE

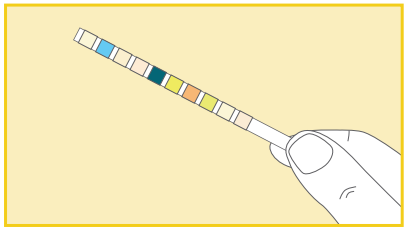
The Test contains plastic strips on which are applied 10 test areas. It is intended for qualitative and semi-quantitative analysis in animal urine of 10 parameters: bilirubin, blood, glucose, ketones, pH, proteins, specific gravity, urobilinogen, leukocytes and nitrites.

HOW TO USE IT

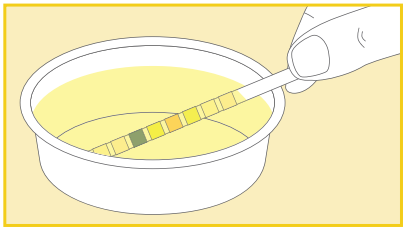
1) Collect the urine in a clean and dry container.



2) Each strip area tests 10 different parameters.



3) Dip the test-strip into the urine sample for 1-2 seconds. Wait 2 minutes and read the result.



CONTENT: 5 sealed aluminum pouches containing: 1 URINARY CHECK-UP PET TEST strip and 1 desiccant bag; instructions for use.
